

Continuous Data Quality Monitoring for Modern Data Teams

ON-PREM

AI POWERED

POWER TO SME

DCR

ON-EDGE

The Problem

In the modern data stack, 30-50% of data team effort is wasted on fixing bad data.

Most data quality tools are reactive, rigid, and miss root causes, leading to:

- Delayed detection (30% of issues reach end users first)
- Lost productivity
- Compromised trust in business data
- Require development cycles

The Solution

Dragonfly is an intelligent, AI-powered platform that transforms how data teams manage quality:

- Statistical anomaly detection & pinpointed root cause
- No-Code rules, templates, and AI assisted checks
- Deep integration into modern stacks
- Proactive monitoring for 1000s of tables & metrics
- Smart alerts via Slack, Email, or use visual Dashboards
- Scales effortlessly with your data pipeline

Why You Need it

- Enterprises demand trustworthy, real-time insights
- Data complexity and volume are exploding
- Human monitoring for Data Quality is costly and intermittent
- Existing tools talk disconnected datasets

Early Traction

- 2M+ monthly data checks with 99% accuracy
- Integrated with AWS, GCP, Snowflake and many more

Built by Experts

- 35+ years combined experience in data engineering & science
- Led by veterans from Data, ML and Martech background
